Art Unit: 2637

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1,13-16,30 and 42-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hui et al., USP 6,198,749 B1 (Hui) in view of Kawano et al., USP 5,933,605 (Kawano).

Regarding claims 1 and 30, Hui teaches a communication system (see Fig.4) comprising: a customer interface (27) configured to supply an upstream data transmission and receive a downstream data transmission; and a plurality of modems (26) in communication with the customer interface via a first data transmission link, the plurality of DSL transceivers in communication with a respective modem at a central office (60) via respective transmission lines, wherein each of the plurality of DSL transceivers is configured to receive a downstream data stream and to transmit and upstream data stream, the upstream data transmission configured for distribution across the plurality of modems, the plurality of modems further configured to generate the downstream data transmission from the plurality of downstream data streams (note col.6, lines 20-38).

Application/Control Number: 09/632,029

Art Unit: 2637

Although, Hui does not explicitly teach wherein the modems are DSL transceivers, it would have been obvious to one skilled in the art at the time of the invention to implement using DSL modems for the purpose of further increasing the data rate, wherein DSL lines are known to support higher data rate than analog lines.

However, Hui does not further teach wherein the plurality of DSL transceivers are in communication with each other via a plurality of DSL transceiver data transmission links.

Kawano teaches (see Fig.1) plurality of computers (201,202,207) comprising transceivers (note col.6, lines 30-32), coupled to an interface (5) and further communicating with each other via transmission line (4). Therefore, it would have been obvious to one skilled in the art at the time of the invention to modify Hui's teaching by connecting the modems together as taught by Kawano for the purpose of communicating data between the modems, thus include a function of routing and transferring (note col.6, lines 15-18).

Regarding claims 13 and 42, Hui teaches means for communicating (27) with customer premises equipment to receive an upstream data transmission, means for distributing (lines coupling from 27 to 26) a portion of the received upstream data transmission to each of a plurality of communication links for transmission, means for receiving (26) a portion of a downstream data transmission distributed across each of the plurality of communication links, means for combining (27) the

Art Unit: 2637

portions of the downstream data transmission such that the downstream data transmission is reconstructed, and means for communicating (27) the reconstructed downstream data transmission to the customer premises equipment.

Although, Hui does not explicitly teach wherein the modems are DSL transceivers, it would have been obvious to one skilled in the art at the time of the invention to implement using DSL modems for the purpose of further increasing the data rate, wherein DSL lines are known to support higher data rate than analog lines.

Regarding claims 14 and 43, Hui in view of Kawano teach all subject matter claimed, as applied to claim 13 or 42. Hui further teaches wherein the means for receiving (26) a portion of a downstream data transmission is accomplished via a plurality of transceiver (transceivers within the modem) dedicated to receive the portion of a downstream data transmission form a predetermined remote DSL transceiver (60).

Regarding claims 15-16 and 44-45, Hui in view of Kawano teach all subject matter claimed, as applied to claim 13. Kawano, as explained previously teaches the limitation of plurality of transceivers serially connected (see 201,202,207 in Fig.1).

Application/Control Number: 09/632,029

Art Unit: 2637

Allowable Subject Matter

- 2. The indicated allowability of claims 1-58 is withdrawn in view of the newly discovered reference(s) to Hui et al., USP 6,198,749 B1 (Hui) in view of Kawano et al., USP 5,933,605 (Kawano).
- 3. Claims 19-29 and 48-58 are allowed.
- 4. Claims 2-12,17-18,31-41 and 46-47 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sam Ahn whose telephone number is (571) 272-3044. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on (571) 272-2988. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
